

## **What's new in Report Generator 15.00B**

### ***New licensing structure***

From this version onwards you do not need to have the same number of licenses for Report Generator as BOM licenses.

This version can generate reports without the need for a BOM license.

### ***Support for ModelManager 15.00B***

With this new release of ModelManager Report generator 15.00B we support version 15.00B of Model Manager

### ***Translate feature (multiple language support)***

With this feature you can use an dictionary to translate fields on a report. This allows you to have a modelmanager attribute in English while retrieving an Russian translation from a dictionary and put them on a report. To activate this function you need to place a new tag into your XML file:

```
<ReportTranslateAttributes>DESCRIPTION,DESCRIPTION2</ReportTranslateAttributes>
```

This tag makes report generator to find a translation for DESCRIPTION and DESCRIPTION2 in the file dictionary.txt located in the templates directory. You can modify the txt file to add your own translations.

With this tag new attributes are created with the same name but prefixed with TR\_.

e.g. TR\_DESCRIPTION and TR\_DESCRIPTION2 in the above example.

### ***Direct printing from Masterdata***

You now can right click a Masterdata and directly call reportgenerator with no need to generate a consolidated report first.

In order to activate this function you need to add the following tag:

```
<Class extends="DMMasterdata, DMReleaseProcess">  
  <Name catalog="awm_stda" msg_num="251">MASTERDATA</Name>  
  <ActionMenuSection>1.5  
    <Action>com.xandorra.report.DirectSendToReportAction</Action>  
  </ActionMenuSection>  
  <NameFormat>%Name%</NameFormat>
```

```
</Class>
```

### ***Remember settings***

When you selects the printer as the default output format, this information will be stored, so the next time you selects the report generator the output format will be default to printer.

### ***Print sub bom***

If you have multi level bom's, you now can generate them all in one go.

You can select the number of levels you want to print.

### ***IReports 2.0***

With this version the Template Builder uses the new Ireports version
